2-3 Milestone One: Project Proposal

Nathan Hunter

Dr. Vivian Lyon

June 29th, 2026

I am thrilled to present a 3D modeling project inspired by my own home! The scene features a dedicated space for my pet bunny, incorporating several interactive elements: a drinking fountain, a pellet dispenser, and a cozy hideaway. This environment provides a blend of geometric complexity, and I have included a reference image and a collection of detailed photos accessible via Google Drive.

https://drive.google.com/drive/folders/1Wy6TX3HJf6olGm_xBgP0xznstOCiGG84?usp=sharing

The foundation of the scene will be a gray textured plane for the rug. While many items follow a standard boxy silhouette, the water fountain introduces more intricate geometry. I plan to construct the fountain using the following components:

- A central Box for the main basin.
- Cylinders to represent the metal piping.
- A Torus to model the water flow, carefully scaled to fit inside the pipe's texture.

I'm also very excited to develop a 3D model of my bunny. This character model will utilize a diverse range of primitive shapes:

- A Tapered Cylinder for the body.
- Tapered Cylinders or Boxes for the feet.
- A Sphere for the head and eyes.
- Pyramids for the ears.

I am eager to explore the available texturing options to represent my bunny's multi-colored fur, though I am prepared to simplify his palette depending on OpenGL's limitations.
